

Kinergetics' Syrup Concentrator™

Specialty Ethanol Industry Product

The Syrup Concentrator™ is a unique high-efficiency forced-circulation evaporation system designed to concentrate de-oiled syrup to total solids concentrations over 50% TS*.

Our approach is to review each plant's unique operations and conditions and design the Syrup Concentrator™ so that its operating parameters are effectively integrated with the facility processes.

This approach results in thermal efficiencies of well over 90%, minimal pumping power, and low operation costs.

Benefits of Installation

- Reduced Gas Use ✓
- Plant efficiency gains of 2,800 to 3,300 BTU/Gallon* ✓
- Increased RTO fan capacity ✓
- Reduced dryer loading ✓
- Lower syrup transportation costs ✓
- Greater plant capacity ✓

*Plant situation dependent

Performance Guarantee

At Kinergetics, we are confident in the designs and results we provide customers.

Therefore, we are happy to guarantee **thermal performance up to 90%** for a number of projects, including installation of our Syrup Concentrator™.
